Chaperonze Treatment Results

Mr. John

This is a summary of results of patient Mr. John, over a 24-month period.

Age: 71

Sex: Male

Other: Vietnam Veteran

Clinical conditions: Type II diabetes, impaired renal function. Poor energy and lethargy

Response to treatment:

Weight Loss > 50lbs

More energy, More Drive, More Vitality

A1C halved to normal limits (>10 down to 5.8)

Renal function tests improved

Testimonial:

"It has taken sustained and consistent treatment with Chaperonze to achieve these miraculous physical and clinical outcomes. I am still losing weight and have not been this healthy in decades. Dr. Paddy tells me that my lifestyle change has been the key. Although not wanting to argue with Paddy, something dramatic has happened after being treated with Chaperonze. My doctors at the VA are in awe!" Mr. J

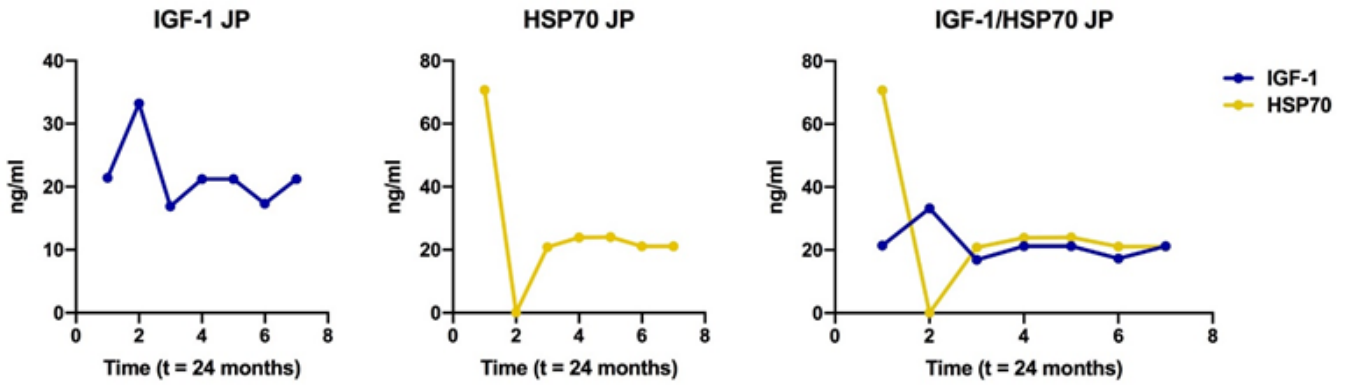

Blood Test Results:

As can be seen in the graphs below, the IGF-1 has stabilized in this patient and this may be associated with the dramatic weight loss and reversal of type II diabetes.

The HSP70 in this patient has dramatically decreased and has remained so for an extended period of time. This dramatic decrease of a key biomarker associated with age is quite impressive and we believe is linked to a reversal of the cellular age of Mr. J.
